

Election Statement

Stacie Hudgens, MA

Please describe your motivation for becoming involved with ISOQOL. How does ISOQOL's mission and vision relate to your work?

ISOQOL aligns directly with my own mission which is to advance patient focused research. My day-to-day work is guided by this principle which allows me to focus my scientific interests to ISOQOL and its scientific contribution to our field. I work in drug development and good measurement science is the cornerstone of ensuring that endpoints are patient-centric. There isn't another organization that aligns so closely to my own research acumen.

Please describe your qualifications and how your experiences will influence your ability to contribute as an ISOQOL Board Member.

My work in drug development starts with pragmatic, innovative, and patient centric research. My early engagement with ISOQOL introduced me to this scientific society where contribution is multi-faceted yet focused on developing scientists; this alignment with my interest has propelled my engagement with ISOQOL. I have worked in academia, industry, and consultancy and feel this, along with my networking and scientific approaches, will allow me to bring experience to the Board. I am very keen to support ISOQOL however I may be able to. It remains the single most influential research society where I feel my contribution with each engagement.

From a business perspective, I know how to contribute and lead in a meaningful way with results-focused approaches. My aim is support and mentor upcoming COA scientists across the broad reach of patient research. Also, my aim is to continue helping ISOQOL, in any capacity, with their networking and growth. The new strategic plan aligns directly with my passion in this area; to grow our field of COA scientists and ensure that they have the tools needed from the most prolific and impactful organization focusing on patient outcomes - ISOQOL.

ISOQOL

INTERNATIONAL SOCIETY FOR QUALITY OF LIFE RESEARCH
